Python ALA-2= What is String:

Write a Python program to print a string

Program:

```
text = "Hello Python"
print(text)
```

Output:

```
Hello Python
```

Explanation:
The string is stored in `text` and printed using `print()`.

---

2. Write a program to find the length of a string

Program:

```
text = "Python"
print(len(text))
```

Output:

```
6
```

Explanation:
`len()` function counts the number of characters in the string.

---

3. Write a program to convert string into uppercase

Program:

```
text = "python"
print(text.upper())
```

Output:

```
PYTHON
```

Explanation:
`upper()` converts all letters to capital letters.

---

4. Write a program to convert string into lowercase

Program:

```
text = "PYTHON"
print(text.lower())
```

Output:

```
python
```

Explanation:
`lower()` converts all letters to small letters.

---

5. Write a program to concatenate two strings

Program:

```
a = "Hello"
b = "World"

c = a + " " + b
print(c)
```

Output:

```
Hello World
```

Explanation:
`+` operator joins two strings.

---

6. Write a program to check substring in string

Program:

```
text = "Hello Python"

print("Python" in text)
```

Output:

```
True
```

Explanation:
`in` checks whether the word exists in the string.

7. Write a program to reverse a string

Program:

```
text = "Python"

print(text[::-1])
```

Output:

```
nohtyP
```

Explanation:
`[::-1]` reverses the string.

8. Write a program to take string input from user

Program:

```
name = input("Enter your name: ")
print("Hello", name)
```

Output:

```
Enter your name: Manthan
Hello Manthan
```

Explanation:
`input()` takes string from user.

9. Write a program to count vowels in string

Program:

```
text = "python"
count = 0

for i in text:
    if i in "aeiou":
        count += 1

print(count)
```

Output:

```
1
```

Explanation:
Loop checks vowels and increases count.

---

10. Write a program to replace word in string

Program:

```
text = "Hello Python"

print(text.replace("Python", "World"))
```

Output:

```
Hello World
```

Explanation:
`replace()` changes word in string.
